NTEGRATOR FORMS STRATEGIC COLLABORATION WITH SURBANA TECHNOLOGIES AND CELLULAR SYSTEMS INTERNATIONAL FOR DEVELOPMENT OF CENTRALISED PARKING MANAGEMENT SYSTEM

- **To pursue the development of a Next Generation Centralised Parking Management System**
- **Partnership with Surbana and Cellular Systems will provide the synergies and expertise necessary for this development**

Singapore, January 17, 2008 - Ntegrator International Ltd. ("Ntegrator"), a leading regional communications network specialist and systems integrator, today announced that it has entered into a Memorandum of Understanding with Surbana Technologies Pte Ltd ("Surbana Technologies"), a world class townships and facilities management total solutions provider, and Cellular Systems International ("CSI"), a pioneering provider of cellular-based remote monitoring solutions based in Israel.

Under the terms of the agreement, the Consortium will develop a centralised car park management system, for marketing by the Consortium in Singapore as well as in the region. By customising CSI's central on-line credit card parking system, which is currently used in Israel to support cash card payment, Ntegrator will integrate the customised system with Surbana's Integrated Estate Management System ("IEMS™") to facilitate the centralised processing of parking transactions, monitoring of equipment status as well as data hosting.

Commented Mr Jimmy Chang, Managing Director of Ntegrator: "This strategic collaboration with Surbana Technologies and Cellular Systems, who are both leading players in their respective industries, marks a significant step for us towards our vision of becoming a global, world class provider of information technology and telecommunications solutions.

“With the development of this Next Generation Centralised Parking Management System, we will be able to better address the increasing opportunities presented by the parking market in the region.”

With over 20 years of experience in providing real-time monitoring of building services and estate management solutions for townships, Surbana Technologies, a wholly owned subsidiary of SURBANA CORPORATION, has built up a niche in customising cost-effective solutions for large township developments. The IEMS™ System Architecture by Surbana Technologies is a one-stop total solution for townships and facilities management, and has been continuously upgraded over the last 20 years.

Founded in 1999, CSI specialises in real-time delivery of mission-critical data over advanced cellular infrastructure, providing the best in remote management, access and control. CSI’s Credit Card Parking System (“CCPS”) is a state-of-the-art cellular solution that automatically identifies customers via their credit card, and enables online, real-time credit card clearing for parking transactions. Based on client-server architecture, CCPS grants parking lot operators secure Web access to a central user-friendly application, allowing them to remotely handle operations and manage multiple facilities.

Added Mr Chang: “Combining the strength of Surbana’s IEMS™ and the CCPS solution, we get a cost-effective application that reduces parking facilities management expenses, thereby improving efficiency and profitability. This is especially important in today’s context, where the increasing lack of parking lot availability, particularly in city centres, has translated to a rising importance of parking lots as valuable assets. With the Next Generation Centralised Parking Management System, we will be able to provide parking proprietors with a flexible and cost-effective solution, which lowers capital and operating expenses, improves customer service, and increases profitability for them.”

The strategic collaboration will commence immediately and is not expected to have a positive impact on the earnings of the Company for the financial year ending December 31, 2008.

About Ntegrator International Ltd.

Established in April 2002, Ntegrator's core businesses include the design, installation and implementation of data, video, fibre optics, wireless and cellular network infrastructure as well as voice communication systems. The Group provides project management services as well as maintenance and support services.

Ntegrator was listed on the SGX-Sesdaq (now renamed to Catalist) on October 26, 2005, and its operations are located regionally covering Singapore, Vietnam, Myanmar, Malaysia and Thailand.
